

THE DESK TOP VANGUARD

The brief for the VANGUARD was to create a desk top unit with as many features of the very successful GUARDIAN system, but in a manual form. The VANGUARD is a robust, solid and simple desktop copy stand mounted with any of our available camera head options. Fully electronic digital capture systems are available with their maximum speed and efficiency, while maintaining our high standard of book handling for bound volumes or flat documents.

With the option of the electronic camera system, around 500-600 documents per hour can be captured without any mechanical shutter function, making it an ideal set up for a production process, where speed of capture is paramount.

The top book glass can be moved away from the document to allow the capture of exceptionally delicate volumes without pressure. Adjustable LED daylight balanced and diffused lighting provides constant illumination, at a relatively low level. This ensures comfort for the operator and safety for the document with no flickering or moving lights

Interchangeable lenses, including zoom, enable a range of document sizes, even small negatives, to be perfectly captured at the highest image quality.
