

## ICAM SLIDE COPIER

### Details

Easy to use fully automatic 35mm slide copier capable of 'production' imaging speeds of 1 image every 3 –4 seconds. Daylight balanced LED lighting, optional 'air knife' for dust removal, and a universal mount for a camera of choice, make the Slide Copier flexible and accurate. Placing the slide in the holder starts the automatic operation with a 'light box' strip for checking slides. The Slide Copier is fully portable and can be used with various software including Phase One 'Capture One' and Icam 'ArCapture'. Connection to a computer system is normally via USB cable.

The camera (optional) with a macro lens can be adjusted for subject distance and height, to ensure the maximum use of sensor pixels, with image resolution exceeding 4,000 ppi depending on camera. Available as a basic unit or complete with camera, macro lens and software.

### Specifications

Size: 780mm x 250mm x 200mm  
Weight: 2.0 Kg excluding camera system  
Electrical supply: 110-240v (internal 12v power supply)
